When severe bleeding, every second counts
think ChitoGuard™

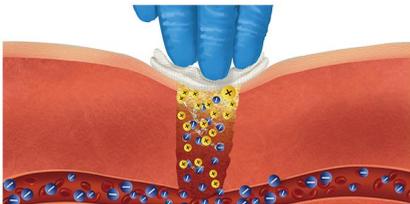

How to use Hemostatic Granules Applicator

1. Identify the penetrating wound

2. Remove plastic tab and insert plunger into applicator barrel. Then insert applicator with plunger as far into wound as possible. Quickly push plunger in while withdrawing the applicator

3. Release granules. Cover and apply firm pressure to the wound until bleeding stops

4. Secure with a dressing to maintain pressure on the wound

1. Identify the penetrating wound.

2. Push in a sufficient amount of granules.

3. Cover and apply firm pressure directly to the wound until bleeding stops.

4. Bandage and seek urgent medical attention.
